Asset Technician

Description

Are you detail-driven, organised, and passionate about keeping our roads safe and efficient? We're looking for a Asset Technician to help manage and maintain vital information on the Strategic Road Network in Wales — from roads and bridges to electrical equipment and tunnels.

In this role, you'll be at the heart of ensuring our highway assets are accurately recorded, maintained, and ready for the future. You'll work with digital tools, analyse asset data, and collaborate with engineers, contractors, and stakeholders to support maintenance planning, budget decisions, and safety compliance.

It's a varied position which includes reviewing digital data as well as a requirement to be on-site verifying information. You'll gain exposure to infrastructure projects, work with experienced professionals, and contribute directly to keeping transport links running smoothly.

If you have a keen eye for detail, good communication skills, and enjoy working both independently and as part of a team, this is a great opportunity to develop your career in asset management.
